Guide
Flexi-Fit

The rail with adjustable brackets

HOW TO PURCHASE & INSTALL YOUR
Guide Flexi-Fit
HANDRAIL

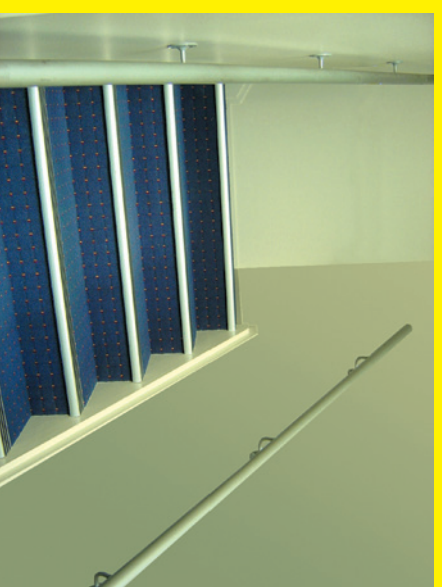

INSTALLING Guide Flexi-Fit HANDRAIL

1. Remove insert from the rail by freeing one end of the PVC and pulling back along the rail length. It simply peels out.

2. Once the substrate fixing points have been established, slide the brackets along the rail length until they are at the required position. Fasten by revolving the W75 bracket or screwing the W60 into the nut inside the channel. Then tighten the locking nut with a 5/8" open ended spanner, ensuring the bracket is at right angles to the rail.

3. With a sharp cutting tool, cut the PVC into lengths to fit into the cavities between the brackets, and between the brackets and ends of rail.

4. Push the PVC into place by pressing down on it. This process is easier after the PVC has been immersed in hot water for three minutes.

5. Pre-drill the fixing holes with a 3.5mm drill bit.

6. Screw the assembled rail into place at a height of between 900mm and one metre with a size 2 square drive bit or screwdriver.

7. Any dirty marks on the rail or insert resulting from installation can usually be removed with a Jif-like product and a wet cloth.
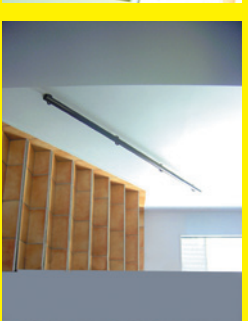

GUIDE AROUND THE HOME (HANDRAILS)

Guide is a well-known and respected system of premium quality aluminium handrails which is used throughout New Zealand and in Australia.

Guide Flexi-Fit features unique, patented sliding brackets which provide the flexibility required to ensure that brackets are fixed to the most suitable substrate (fixing points).

Guide Flexi-Fit has an attractive and durable finish for years of maintenance free enjoyment.

And because the brackets and rail won't rust, **Guide Flexi-Fit** can be used for both interior and exterior applications.

Guide Flexi-Fit handrails are supplied as 45mm diameter rail, complete with the components required for assembly and installation.

Note: **Guide Flexi-Fit** 32mm handrail is not supplied on the handrail display stand but can be ordered in if required.

GUIDE IN THE BATHROOM (SAFETY GRAB RAILS)

Guide Flexi-Fit safety grab rails are supplied in a range of sizes from 450mm straight lengths through to 750mm x 750mm ninety degree rails. Standard colours include white, bright silver and almond.

Guide Flexi-Fit safety grab rails are supplied as a 32mm diameter finished product. Look for the distinctive packaging in the bathroom department in-store, or ask the helpful staff.

PURCHASING Guide Flexi-Fit HANDRAIL

Length - The first thing to decide is the length of rail required. **Guide Flexi-Fit** handrail is supplied in lengths of one, two and three metres. Lengths up to five metres are available on request.

Colour - Guide Flexi-Fit handrail is supplied in three standard colours - black, silver and off white. Black brackets are most commonly used with black rail, silver brackets for silver rail and off white for off white rail.

Brackets - On the **Guide Flexi-Fit** handrail stand you will find two different types of brackets.

The **W75** bracket is used for mounting **Guide Flexi-Fit** handrail on the side of a wall.

The **W60** bracket is used for mounting **Guide Flexi-Fit** handrail on top of a wall (such as an interior halfwall).

W60 bracket

W75 bracket

Fixings - Square drive screws (which require a size 2 drive bit or screwdriver) are supplied with each bracket. For fixing into timber stud or dwang, no additional screws are required. When fixing into brick, concrete, masonry or steel, ask for guidance from staff in-store.

End Caps - End caps are available in black and white, packaged as pairs. Black end caps are most commonly used with black and silver rail, while white is more common for off white rail.

PVC Insert - PVC insert is prepackaged with each length of rail - black insert with black and silver rail, and white with off white rail.

Purchase checklist

Rail of required length and colour ☐
Brackets - right kind (W75 / W60) ☐
