EPERF	Ecofoam Perforated Per Metre	
EBLACK	Ecofoam Black surcharge	

Tetral can also perforate Ecofoam, depending on the profile we would add a 10mm hole to every rise or second rise of the foam, additional charges will apply, code EPERF

We can also supply Ecofoam in Black, which will cost 10% more than our standard price for Grey foam, using our code EBLACK

Both these products are made to order

What makes Ecofoam more attractive over other foams?

Ecofoam is used with metal and clear roofing or cladding. Whilst it can be retrofitted it is far easier to fit while the roof is being put down. Ecofoam is UV stable giving excellent performance in harsh climates & does not absorb moisture.

Ecofoam is a PE30 polyethylene foam closed cell cross link foam which does not require compression to seal a gap.

Ecofoam is widely used in the roofing industry as eave and ridge fillers sealing out rain, dust and wind and also preventing wind noise and potential roof rattling.

Ecofoam is supplied as a standard concrete grey colour, black is also available by request.

The foam comes in 2 metre strips, 20mm wide unless otherwise noted.

How do I know what profile I want?

Use our Ecofoam specification templates to make a suitable selection of the profile for your project. Simply place the profile drawings of either a scaled, or an actual size on your plans.

Narrow tip is usually applied at the gutter end of the roof, wide tip is applied at the ridge end of the roof. Some profiles are applied at the gutter & ridge for example corrugated.

Are the drawings going to match exactly what I will get?

The measurement, on these drawings are derived from the manufacturers specification. Foam is cut to fit the specification with the linear tolerance of ± 5.00 mm per linear metre and the total angular tolerance of $\pm 2.00^\circ$.

How do I order?

Ecofoam is available in 2 metre lengths and is charged by a metre rate.

When ordering, please use the product codes listed. Send an email to "sales@tetral.co.nz" with P/O.

Freight charges

Freight is charged when the cost is under \$250.00 excluding GST

Above this order will be freight free.

What is ETA time frame?

Any order under 1000m we aim to dispatch within 3 working days from our Christchurch factory.

Depending on the size of the order we use PBT Couriers & Mainfreight as our freighting company.

What makes Bitufoam the right product to use?

Bitufoam is primarily a compression or gasket seal. It can be installed during construction or retrofitted by forcing into a gap that requires sealing. It is a good option for retro fitting as it can be compressed to fit a gap.

Like Ecofoam it is used to seal from rain, dust, wind and as an effective pest deterrent.

What is Bitufoam made from?

Bitufoam is made from an open cell polyurethane foam, which then is impregnated with a water soluble bitumen solution which is then dried and no longer soluble, this can make it tacky to work with.

Are the drawings going to match exactly what I will get?

The measurement, on these drawings are derived from the manufacturers specification. Foam is cut to fit the specification with the linear tolerance of ± 5.00 mm per linear metre and the total angular tolerance of $\pm 2.00^\circ$.

How do I order?

Bitufoam is available in 2 metre lengths and is charged by a metre rate.

When ordering, please use the product codes listed. Send an email to "sales@tetral.co.nz" with P/O.

Can Bitufoam come in other profiles?

We can make Bitufoam in many profiles that we make Ecofoam, this is made to order and would be made in 2000mm long & 30mm wide strips.

There will be a minimum order size depending on the profile usually between 80 - 160 metres & a 4 - 6 week lead time to manufacture the product. If job is urgent we can supply Ecofoam instead.

Freight charges

Charges are the same as Ecofoam.

What is ETA time frame?

Bitufoam profiles shown are stocked we aim to dispatch within 3 working days from our Christchurch factory.

If orders have been above average it can take 4 weeks to restock standard Bitufoam sizes.

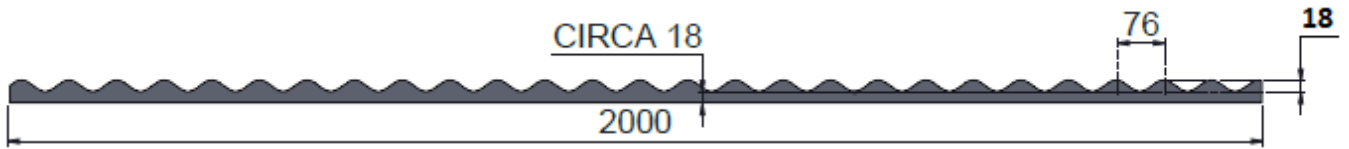

Depending on the size of the order we use PBT Couriers & Mainfreight as our freighting company.
