CUSTOM MADE TRACKS

Instructions

To manufacture a custom product we need accurate information. It is possible to make slight adjustments on site but measurement accuracy is important.

1. All measurements must be taken from the fixing point. (where the track is fixed to the wall or ceiling). This is very important as all allowances for brackets will be made during bending.

2. Please provide a separate diagram for each track that you want bent.

3. Provide the angle in degrees for all bends, if these are not available X and Y measurements are required along with the length of each section of track.

4. The maximum total length of track is 6 metres. Tracks over 6 metres in length will be supplied in two pieces which will need to be joined on site. The best place for a join is where the curtains meet.

Bends 3 and 5 in the diagram below are only suitable for hand drawn curtains.
